ABB India Limited

<https://www.indiamart.com/abb-electrification-division/>

ABB is a pioneering technology leader in robotics and motion, electrification products, industrial automation and power grids, serving customers in utilities, industry and transport and infrastructure globally.

About Us

ABB's operations are organized into four global divisions, which in turn are made up of specific business units focused on particular industries and product categories.

- **ROBOTICS AND MOTION**

The Robotics and Motion division provides products, solutions and related services that increase industrial productivity and energy efficiency.

Its motors, generators, drives and robotics provide power, motion and control for a wide range of automation applications. The leading position in wind generators and traction converters complements the industrial focus, leveraging joint technology, channels and operations platforms.

Offering: Motors, generators, drives, mechanical power transmission, robotics, wind and traction converters.

Customers: Manufacturers, OEMs in a variety of industries and utilities, industry end users and transportation and infrastructure operators.

Key fact: ABB is the world's largest supplier of industrial electric motors and drives.

- **ELECTRIFICATION PRODUCTS**

Offering: Technology across the full electrical value chain from substation to the point of consumption, enabling safer and more reliable power. A range of digital and connected innovations for low- and medium-voltage, including EV infrastructure, solar inverters, modular substations, distribution automation, power protection, wiring...
